

To: SecureLink Arabia | Re: Keycloak on-prem IAM delivery partner

Implementation Plan & Commercial Offer

How I will deliver the 250–300 user Keycloak platform — Active Directory, MFA, and application SSO — aligned to your customer approval scope.

SUBMITTED BY

Talha Bilal

CUSTOMER CONTEXT

250–300 users · on-prem KSA · up to 8 apps

MY FIXED OFFER

SAR 76,000 (excl. VAT)

PORTFOLIO

talha-bilal.github.io/portfolio

ROLE

Senior Keycloak / IAM engineer (remote)

DELIVERY WINDOW

4–6 weeks (with your customer)

CONTACT

talha.at43@gmail.com

DATE

June 2026

1. Purpose of this document

SecureLink holds the **customer relationship and commercial contract** with the end client. This document is **my plan and my price** to you as **technical delivery partner** — how I will implement the approved scope and what you pay me for that work.

Not a customer-facing proposal. Your team shares the customer approval scope with the end client. I share this document with **SecureLink only** so you can evaluate delivery approach, timeline, and subcontractor cost before you engage me.

What I understand you need from me

Your customer needs (from scope doc)	What I deliver to you
On-prem Keycloak + PostgreSQL	Deployed, hardened, documented platform
Active Directory / LDAPS integration	Federation, sync, group mapping, tested auth
MFA (authenticator OTP)	Policy, enrollment flow, admin procedures
SSO for up to 8 applications	OIDC and SAML client configuration per app
4–6 week delivery	Phased execution with you and app owners
Handover & documentation	Admin guide, backup/restore, KT session

How we work together

- **SecureLink** — customer PM, commercial, access coordination, UAT scheduling with app owners
- **Talha Bilal** — hands-on Keycloak engineering, AD federation, MFA, app SSO configuration, technical docs
- **Customer IT** — VMs, AD service account, DNS/TLS, firewall (via your coordination)

2. My technical approach

I operate on-prem Keycloak in production today (Dictalabs): AD/LDAP federation, OIDC application SSO, realm lifecycle, and custom SPI where required. The customer engagement follows the same proven pattern.

Principles I follow on every phase

- AD stays master — no duplicate user database unless agreed
- Production Keycloak config (PostgreSQL, TLS) — not dev-mode in go-live
- Per-application UAT sign-off before production cutover
- Realm export + DB backup before each major change
- Written handover so your team can support after my engagement

3. Phase-by-phase delivery plan

Aligned to your customer approval scope (Phases 1–6). I estimate **22–24 billable days** over 4–6 calendar weeks.

1

Discovery & design ~3 days

- Join kickoff with customer IT and app owners (remote)
- Validate AD topology, LDAPS path, 8-app protocol matrix (OIDC vs SAML)
- Produce technical design: realm, federation, firewall matrix, cutover plan
- Output: design doc you can attach to customer pack

2

Platform deployment ~4 days

- Install Keycloak + PostgreSQL on customer VMs (Docker or native per agreement)
- TLS, admin RBAC, brute-force, session timeouts, logging
- Smoke test and initial backup baseline

3

Active Directory / LDAPS ~3 days

- Configure user federation (bind account, search bases, sAMAccountName/UPN)
- Group → role mappers; sync up to 300 users
- Test valid login, disabled account, group change

4

MFA configuration ~2 days

- TOTP authenticator policy (baseline per scope)
- Pilot with IT users; admin reset procedure documented

5

Application SSO — 8 apps ~10 days

- Per app: client registration, metadata/redirect URIs, claims, logout
- Support app owner UAT; fix mapping issues
- Apps per scope: Dynamics, ServiceDesk Plus, Endpoint Central, portal, Temenos, Tookitaki, SAS, +1 TBD

6

Testing & handover ~2 days

- Regression: AD + MFA + SSO; backup/restore drill
- Administrator guide, implementation notes, remote KT session (half day)
- Support your customer sign-off call if needed

4. Timeline

Week	My focus	SecureLink / customer
1	Discovery, design, prerequisites review	VMs ordered, app owners named, kickoff
2	Deploy Keycloak; AD/LDAPS live	DNS, TLS cert, firewall rules, AD service account
3	MFA; apps 1–3 SSO	App owners in UAT
4	Apps 4–8 SSO	Change windows, UAT sign-offs
5	Regression, issue fixes	Customer UAT support
6	Docs, KT, close-out	Customer sign-off

Slips if: late VM access, firewall delays, or app owners unavailable > 5 business days.

5. What I need from SecureLink to start

Item	When
Signed subcontract / SOW referencing customer scope	Before Phase 1
VPN or jump access to customer Keycloak + DB servers	Week 2
AD bind account credentials (secure channel)	Week 2
Intro to customer AD admin and each app owner	Week 1
Customer SSO vendor docs per application	Week 1–3
Single point of contact at SecureLink for priorities	Ongoing

6. Out of scope for my fee

- Customer infrastructure procurement, OS/DB licensing, SSL purchase
- Application source code changes or custom connectors
- SecureLink sales, legal contract with end customer, 24×7 post-warranty support
- On-site KSA travel (quoted separately if required)
- Apps beyond 8 or without standard SSO protocols

7. My commercial offer to SecureLink

Fixed price for complete **remote technical delivery** of Phases 1–6 above. You manage customer commercial and margin separately.

Phase	My work	SAR
1	Discovery & technical design	8,000
2	Keycloak + PostgreSQL deployment & hardening	16,000
3	AD / LDAPS federation (≤ 300 users)	14,000
4	MFA (TOTP) configuration	6,000
5	8 × application SSO integrations	24,000
6	Testing, documentation, KT	8,000

My total fixed fee to SecureLink

SAR 76,000

Excludes VAT · Remote delivery · ~22–
24 billable days

Alternative: time & materials

If you prefer T&M: **SAR 3,250 per day** (8 hours), estimated **24 days** ≈ SAR 78,000 cap with your written approval before exceeding.

Payment schedule

Milestone	%	SAR	Trigger
Engagement start	30%	22,800	Signed SOW + kickoff
AD + MFA working in UAT	25%	19,000	Phases 3–4 accepted by you
8 applications in UAT	30%	22,800	Phase 5 accepted by you
Project close	15%	11,400	Handover complete

Included warranty

14 calendar days after my handover: defect fixes for configuration I delivered (not new apps or scope changes).

8. Why engage me on this project

Capability	Evidence
On-prem Keycloak in production	Technical Team Lead, Dictalabs — realms, AD/LDAP, OIDC SSO
Java / Spring Boot platforms	5+ years PKI, signing, IAM microservices
Pre-sales support for you	Runnable demo + technical PDF for customer calls
Remote delivery	UTC+5, overlap with KSA business hours
Documentation	Design docs, admin guides, KT — reduces your support load
